Summary

Software Engineer & Competitive Programmer specializing in scalable system design, concurrent programming, and backend reliability. Recognized in **Google The Big Code 2026** and as a **HackWithInfy Specialist Programmer**. Currently an **Amazon ML Summer School** scholar bridging algorithmic optimization and applied ML.

Education

GLA University, Mathura — Aug 2023 – Jun 2027 (Expected)
B.Tech in Computer Science and Engineering — *CGPA: 8.85 / 10*

Experience

Amazon ML Summer School 2026 — Jul 2026 – Aug 2026
Machine Learning Scholar — *Remote*

- Selected for a nationally competitive 8-module program led by Amazon Scientists, bridging core mathematical theory with real-world industry applications.
- Implementing a math-first approach to Deep Neural Networks, while specializing in advanced architectures including Generative AI, LLMs, and Sequential Learning for enterprise-scale systems.

Skills

Programming Languages: Java, C++, Python, SQL, JavaScript

Libraries & Frameworks: Node.js, Express.js, React.js, REST API Design

Core Skills: Data Structures & Algorithms, Operating Systems, Multithreading & Concurrency (Mutex, Semaphore, Condition Variables), OOP, DBMS, Computer Networks, Design Pattern, System Design & Architecture

Testing & Quality: Unit & Functional Testing, API Testing (Postman), Test Automation, Debugging, Code Reliability

Databases & Tools: PostgreSQL, MySQL, MongoDB, Linux, Git

Competitive Programming & Achievements

- **HackWithInfy 2026:** Secured the Specialist Programmer (SP) offer in a national-level contest.
- **Codeforces:** Ranked as a Candidate Master with a peak rating of 2004 in global standings.
- **LeetCode:** Achieved the Guardian badge with a 2348 max rating and solved 1,000+ problems.
- **BitShift 2026** (IIT Madras × Jane Street): Secured Global Rank 23 out of 1,000+ participants.
- **Google The Big Code 2026:** Advanced to the Semifinals, ranking Top 1,500 among 100,000+ nationwide.
- **Flipkart GRiD 8.0:** Progressed to Round 3 as a Semifinalist in the national engineering hackathon.

Projects

IntervueAI – AI-Powered Technical Interview Platform | GitHub | Live — Jan 2026 – Mar 2026
React 19 | *Node.js* | *Yjs CRDT* | *Groq LLaMA-3.3-70B* | *Stream SDK* | *Piston API*

- Independently architected a cloud-connected collaborative technical interview platform with WebRTC video communication and real-time coding via Monaco Editor, exposing 50+ REST endpoints.
- Built an automated test-execution and judging pipeline via Piston API to validate code submissions against test cases in secure, sandboxed environments across multiple languages.
- Designed concurrency control for real-time state synchronization using Yjs CRDTs, resolving race conditions across concurrent multi-user edits without locks, alongside a GenAI pipeline for instant interview feedback.

HealthBridge – AI Healthcare Ecosystem | Top 10/200+ Teams | GitHub | Live — Aug 2025 – Dec 2025
Node.js | *Flask* | *MongoDB* | *Socket.io* | *XGBoost* | *scikit-learn* | *LLaMA-3.1-8B*

- Led a cross-functional team to build a centralized MERN-based telemedicine ecosystem with real-time doctor consultations, SOS alerts, and role-based management dashboards across 60+ REST APIs.
- Architected a polymorphic MongoDB data graph and validated role-based access through targeted test scenarios, blocking IDOR vulnerabilities via strict ownership filters.
- Deployed a dual-paradigm AI layer: XGBoost for disease prediction, benchmarking and monitoring sub-10ms inference latency, plus a LLaMA-powered medical chatbot for symptom analysis.
